Team name: Pseudocoders

Problem Statement: An Elevated Charity Donation Management System
Many donors cannot make donation due to lack of trusts or charities. Hence, charity and trusts also don't get proper amount of money.

Target Audience: Charities, trusts and Donors

Ideation Process: Here the website will be a medium between donor and trust or charity. In this website we have used HTML, CSS, JS, react JS, Node JS, etc.

Proposed Solution: By this website donors and trusts or charities are getting the donation from their convenient place and time.
The donor or trust needs to login in the web page.
Donor will then choose the trust or Charity so that a QR code and a UPI id will be made visible to him/her. Then, the user will be able to donate the money according to his/her willingness. For Charity or Trust's registration, we will need the UPI id of the trust. After registration, Trust can see the name of donors, amount they have donated and the total amount.

Value Proposition: This web site will provide an easy and responsive transaction between donors and trusts or charities.
